

opportunities

"I love the student-faculty dynamics at Milligan. The professors are really there for you. And the science program is very strong, with a gross anatomy lab and first-class learning opportunities you wouldn't find even at many larger schools."

AREA OF SCIENCE & MATH

Curriculum

Superior training is what students interested in the medical, science, math, or technical fields will find in Milligan's Scientific Learning Area. Through classroom and lab experiences, various research and internship opportunities, and use of online tools, students can explore new technology and become critical thinkers who can successfully comprehend and communicate scientific

knowledge. Small classes and one-on-one personal attention from professors provide an excellent education.

Faculty

Milligan's science and math faculty have doctoral degrees from Tennessee, UCLA, Michigan State, Iowa State, and Penn State. They are recognized and published scholars, and most importantly, they are excellent teachers and caring mentors.

Successful Graduates

Graduates are working in biomedical and biological sciences, education, industry, engineering, healthcare, research, and government services. Our graduates perform very competitively in post-baccalaureate programs (such as medical, dental, pharmacy, and other graduate schools) throughout the country. Many are serving as physicians and medical missionaries throughout the world.

Facilities & Equipment

An entire building is devoted to biological, physical, and chemical sciences at Milligan. The Science Building has five 24-station labs, multiple classrooms, and a gross anatomy lab.

"We strive to educate scientists and mathematicians who can think critically and apply foundational principles in new and varied settings. No matter what career path our graduates pursue, they take with them a deep appreciation for the beauty and wonder of God's creation."

— Diane Junker, Ph.D.
